

Operation Analytics and Investigating Metric Spike

Sowmiya R

(Advanced sql)

Introduction

Operational Analytics is a category of business analytics that's focused on syncing data from your warehouse directly to your business tools – thus ensuring that everyone across your organization has access to the same data regardless of their technical skills. Using operational analytics, you can review data in what's known as Near Real-Time

(NRT) as it enters your systems. This gives you immediate insights that can alert you to failures in your system before they escalate.

Case Study 1 (Job Data)

- **Number of jobs reviewed:** Amount of jobs reviewed over time.
- **Throughput:** It is the no. of events happening per second.
- **Percentage share of each language:** Share of each language for different contents.
- **Duplicate rows:** Rows that have the same value present in them.

Case Study 2 (Investigating metric spike)

- **User Engagement:** To measure the activeness of a user.
Measuring if the user finds quality in a product/service.
- **User Growth:** Amount of users growing over time for a product.
- **Weekly Retention:** Users getting retained weekly after signing-up for a product.
- **Weekly Engagement:** To measure the activeness of a user.
Measuring if the user finds quality in a product/service weekly.
- **Email Engagement:** Users engaging with the email service.

We were required to provide a detailed report for the below two operations mentioning the answers for the below related questions.....

PROJECT DESCRIPTION

Investigating metric spike is also an important part of operation analytics as being a Data Analyst you must be able to understand or make other teams understand questions like- Why is there a dip in daily engagement? Why have sales taken a dip? Etc. Questions like these must be answered daily and for that it's very important to investigate metric spike.

APPROACH

The application that the below questions is been answered by the MySQL workbench. First, I need to analyze the given set of instructions through the dataset has been given with this project description. Then need to transfer the excel dataset to the SQL query.

TECH-STACK USED

MySQL Workbench is been used to compile the queries related to the questions . (MySQL 8.0.33)

INSIGHTS

Case Study 1 (Job Data)

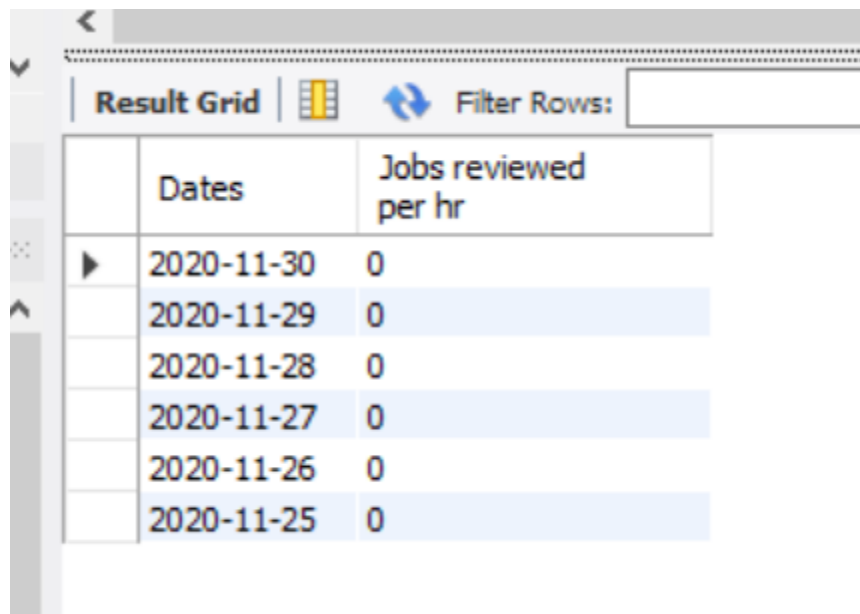

1. **Number of jobs reviewed:** Amount of jobs reviewed over time.

Our task is to Calculate the number of jobs reviewed per hour per day for November 2020.

```

SELECT ds AS Dates, (round(count(job_id)/sum(time_spent))*3600) as
'Jobs reviewed per hr'
from `sql project-1 table (1)`
where ds between '2020-11-01' and '2020-11-30'
group by ds;

```

The screenshot shows a database interface with a 'Result Grid' tab. The grid displays a table with two columns: 'Dates' and 'Jobs reviewed per hr'. The data shows zero jobs reviewed per hour for each day from 2020-11-25 to 2020-11-30.

| | Dates | Jobs reviewed per hr |
|---|------------|----------------------|
| ▶ | 2020-11-30 | 0 |
| | 2020-11-29 | 0 |
| | 2020-11-28 | 0 |
| | 2020-11-27 | 0 |
| | 2020-11-26 | 0 |
| | 2020-11-25 | 0 |

2. **Throughput:** It is the no. of events happening per second.

Our task is to Calculate 7 day rolling average of throughput? For throughput, do you prefer daily metric or 7-day rolling and why?

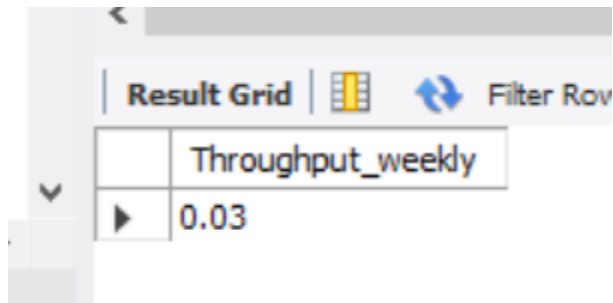

```

SELECT (ROUND(COUNT(event)/sum(time_spent),2)) as
Throughput_weekly

```

```
FROM `sql project-1 table (1)`;
```

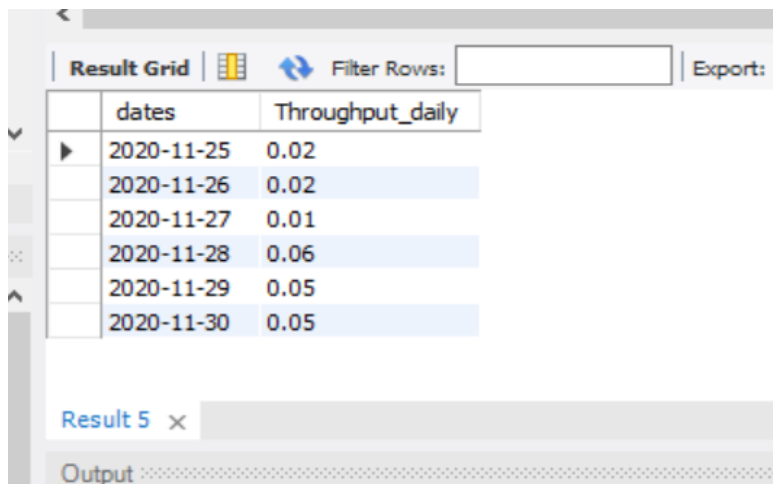

The weekly throughput is 0.03

The screenshot shows a 'Result Grid' interface. It contains a single table with one row. The column is labeled 'Throughput_weekly' and the value is 0.03.

| Throughput_weekly |
|-------------------|
| 0.03 |

```
select ds as dates, (ROUND(COUNT(event)/sum(time_spent),2)) as  
Throughput_daily  
FROM `sql project-1 table (1)`  
group by ds  
order by ds;
```

The screenshot shows a 'Result Grid' interface with a table containing dates and their corresponding daily throughputs. The table has two columns: 'dates' and 'Throughput_daily'. The data is ordered by date.

| dates | Throughput_daily |
|------------|------------------|
| 2020-11-25 | 0.02 |
| 2020-11-26 | 0.02 |
| 2020-11-27 | 0.01 |
| 2020-11-28 | 0.06 |
| 2020-11-29 | 0.05 |
| 2020-11-30 | 0.05 |

3. Percentage share of each language: Share of each language for different contents.

Our task is to calculate the percentage share of each language in the last 30 days.

```
SELECT 'language' AS Languages, (ROUND (100* COUNT(*)/total,2)) as
percentage_of_lang
FROM `sql project-1 table (1)`
CROSS JOIN (SELECT COUNT(*) as total FROM `sql project-1 table (1)`
sub_total
GROUP BY languages;
```

| | Languages | Percentage |
|---|-----------|------------|
| ► | English | 12.50 |
| | Arabic | 12.50 |
| | Persian | 37.50 |
| | Hindi | 12.50 |
| | French | 12.50 |
| | Italian | 12.50 |

4. Duplicate rows: Rows that have the same value present in them.

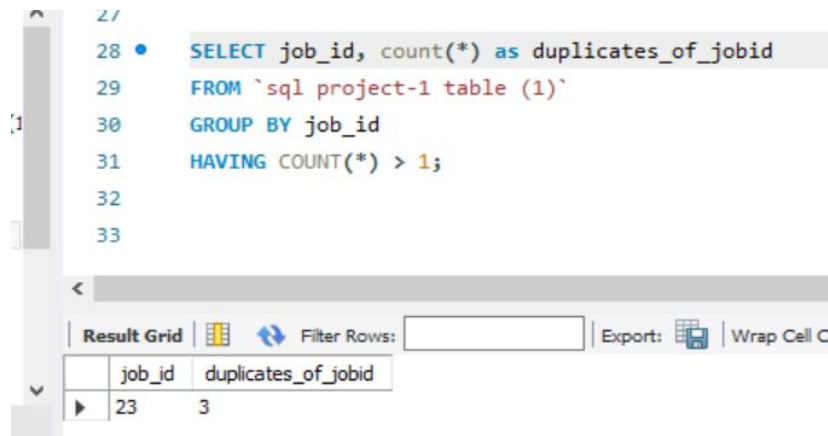

Our task is to the display duplicates from the table.

```
SELECT job_id, count(*) as duplicates_of_jobid
```

```
FROM `sql project-1 table (1)`
```

```
GROUP BY job_id
```

```
HAVING COUNT(*) > 1;
```

The screenshot shows a SQL query editor with a query that finds duplicate job IDs. The query is as follows:

```
27  
28 • SELECT job_id, count(*) as duplicates_of_jobid  
29 FROM `sql project-1 table (1)`  
30 GROUP BY job_id  
31 HAVING COUNT(*) > 1;  
32  
33
```

Below the query editor, the 'Result Grid' is displayed, showing the results of the query:

| job_id | duplicates_of_jobid |
|--------|---------------------|
| 23 | 3 |

Case Study 2 (Investigating metric spike)

1. **User Engagement:** To measure the activeness of a user.
Measuring if the user finds quality in a product/service.

Our task is to calculate the weekly user engagement.

```
SELECT EXTRACT(week FROM occurred_at) AS weekly_no,
```

```
COUNT(distinct user_id) AS count_of_distinct_user
```

```
FROM table_2
```

```
GROUP BY weekly_no;
```

```

6 • select extract(week from occurred_at) as weekly_no,
7      count(distinct user_id) as count_of_distinct_user
8      from table_2
9      group by weekly_no;

```

| weekly_no | count_of_distinct_user |
|-----------|------------------------|
| 17 | 79 |
| 18 | 29 |
| 19 | 12 |
| 20 | 3 |
| 21 | 1 |
| 23 | 1 |

2. **User Growth:** Amount of users growing over time for a product.

Our task is to calculate the user growth for product.

```

SELECT year, num_of_week, num_of_active_users,
SUM(num_of_active_users) OVER(ORDER BY year, num_of_week rows
BETWEEN unbounded preceding and current row)
AS cumm_of_active_users
FROM
(SELECT
    EXTRACT(year FROM a.activated_at) AS year,
    EXTRACT(week FROM a.activated_at) AS num_of_week,
    COUNT(distinct user_id) AS num_of_active_users
FROM table_1 a
WHERE state='active'
GROUP BY year, num_of_week
ORDER BY year, num_of_week
)a;

```

| Result Grid | | | | |
|-------------|------|--------------------|---------------------|----------------------|
| | | Filter Rows: | | |
| | | Export: | | |
| | | Wrap Cell Content: | | |
| | year | num_of_week | num_of_active_users | cumm_of_active_users |
| | 2013 | 0 | 23 | 23 |
| | 2013 | 1 | 30 | 53 |
| | 2013 | 2 | 48 | 101 |
| | 2013 | 3 | 36 | 137 |
| ▶ | 2013 | 4 | 30 | 167 |
| | 2013 | 5 | 48 | 215 |
| | 2013 | 6 | 38 | 253 |
| | 2013 | 7 | 42 | 295 |
| | 2013 | 8 | 34 | 329 |
| | 2013 | 9 | 43 | 372 |

Result 3 x

3. Weekly Retention: Users getting retained weekly after signing-up for a product.

Our task is to calculate the weekly retention of users-sign up cohort.

```
select count(user_id),
       sum(case when retention_week = 1 then 1 else 0 end) as
retention_per_week
from
(
select (a.user_id,
       a.sign_up_week,
       b.engagement_week,
       b.engagement_week - a.sign_up_week) as retention_week

from
(
(select distinct user_id, extract(week from occurred_at) as
week_signup
from table_2
where event_type = 'signup_flow'
and event_name = 'complete_signup'
```

```

and extract(week from occurred_at)=18)a
left join
(select distinct user_id, extract(week from occurred_at) as
engagement_week
from table_2
where event_type = 'engagement')b
on a.user_id = b.user_id
)
)
group by user_id
order by user_id;

```

| year | week | device | count(distinct user_id) |
|------|------|------------------------|-------------------------|
| NULL | NULL | acer aspire desktop | 198 |
| NULL | NULL | acer aspire notebook | 338 |
| NULL | NULL | amazon fire phone | 89 |
| NULL | NULL | asus chromebook | 355 |
| NULL | NULL | dell inspiron desktop | 360 |
| NULL | NULL | dell inspiron notebook | 677 |
| NULL | NULL | hp pavilion desktop | 339 |
| NULL | NULL | htc one | 196 |

4. **Weekly Engagement:** To measure the activeness of a user.
Measuring if the user finds quality in a product/service weekly.

Our task is to calculate the weekly engagement per device.

```

select extract(week from occurred_at)as week_signup, extract(year from
occurred_at)as year, device,
count(distinct user_id)as 'count_of_user'
from table_2
where event_type='engagement'
group by 1,2,3
order by 1,2,3;

```

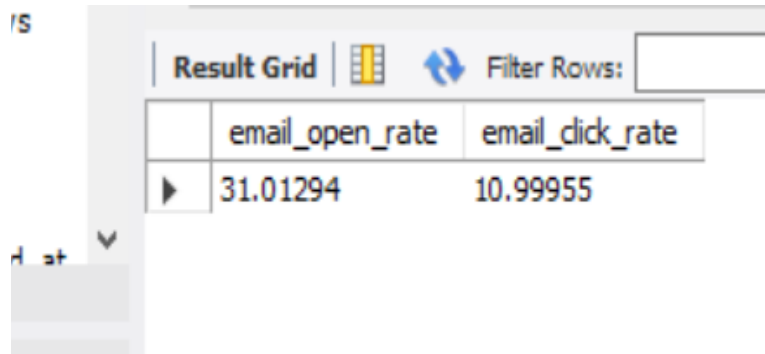

The screenshot shows a 'Result Grid' interface with a table of data. The table has four columns: 'week_signup', 'year', 'device', and 'count_of_user'. There are 15 rows of data, all for the year 2014 and week 17. The devices listed are various desktops, notebooks, and smartphones. The counts range from 1 to 9.

| week_signup | year | device | count_of_user |
|-------------|------|------------------------|---------------|
| 17 | 2014 | acer aspire desktop | 1 |
| 17 | 2014 | acer aspire notebook | 2 |
| 17 | 2014 | amazon fire phone | 1 |
| 17 | 2014 | asus chromebook | 3 |
| 17 | 2014 | dell inspiron desktop | 1 |
| 17 | 2014 | dell inspiron notebook | 4 |
| 17 | 2014 | hp pavilion desktop | 2 |
| 17 | 2014 | htc one | 2 |
| 17 | 2014 | ipad air | 1 |
| 17 | 2014 | ipad mini | 3 |
| 17 | 2014 | iphone 4s | 3 |
| 17 | 2014 | iphone 5 | 9 |
| 17 | 2014 | iphone 5s | 5 |
| 17 | 2014 | lenovo thinkpad | 6 |
| 17 | 2014 | mac mini | 1 |

5. Email Engagement: Users engaging with the email service.

Our task is to calculate the email engagement metrics.

```
select
100.0 * sum(case when email_cat = 'email_opened' then 1 else 0 end)
      /sum(case when email_cat = 'email_sent' then 1 else 0 end)
as email_open_rate,
100.0 * sum(case when email_cat = 'email_clicked' then 1 else 0 end)
      /sum(case when email_cat = 'email_sent' then 1 else 0 end)
as email_click_rate
from
(
select *,
case when action in ('sent_weekly_digest', 'sent_reengagement_email')
      then 'email_sent'
      when action in ('email_open')
      then 'email_opened'
      when action in ('email_clickthrough')
      then 'email_clicked'
end as email_cat
from email_events
)a;
```

| | email_open_rate | email_click_rate |
|--|-----------------|------------------|
| | 31.01294 | 10.99955 |

RESULT

In this project , I had learnt how to apply advanced SQL queries like group by and order by clauses together, cases and extracting dates and so on. And I have understand that how to find the valuable insights which help the business to grow, or make other teams understand questions like- Why is there a dip in daily engagement? Why have sales taken a dip? Questions like these must be answered daily and for that its very important to investigate metric spike.
